

*Quincy Conley has worked as a dedicated learning scientist for over 18 years. His primary functions are to decide what combination of appropriate instructional design techniques and technology to use to create instructional materials to fulfill designated learning goals. His current research interests are in performance support systems, augmented reality, and usability testing.*

*Jessica Scheufler is a freelance writer, researcher, and instructional designer with a background in advertising, social media, and content marketing. She has worked on instructional design and development projects for both colleges and non-profits. Her research interests include user experience, 21st century skill development, and persuasive technology.*

*Gina Persichini is an instructional design consultant and a librarian. She has trained library workers and educators for over 20 years to utilize technology tools for research and classroom application. She is interested in further research to improve the accessibility of information and education to all individuals.*

*Patrick R. Lowenthal, Ph.D., is an Associate Professor at Boise State University, where he teaches master's and doctoral students in fully online graduate programs. He researches how people communicate using emerging technologies—with a specific focus on issues of presence, identity, and community online.*

*Michael Humphrey, EdD, is an associate professor in Early & Special Education Department at Boise State University. His current research focuses on building teacher-efficacy in inclusive classrooms, preparing teachers to work with culturally and linguistically diverse populations, and improving teacher retention.*
